

The ultimate permanent solution for hair loss

SMP® treatment that replicates hair and grows confidence

ARE YOU anxious about your hair loss? Is it affecting your confidence, your social life, work life or your relationships? Do you look in the mirror every morning and wish you had more hair? There is a way to make a change. Scalp Micropigmentation (SMP®) is a highly advanced, modern hair loss treatment for men that replicates real shaven hair follicles on the scalp. The illusion is so realistic that you actually believe you have hair, and so does everyone else.

The ultimate modern solution for hair loss is now available in Hong Kong. Get what style icons and celebrities are calling: "The next male grooming must-have." Break free from your anxieties and leave hair loss behind for good.

What is the SMP®?

"The SMP® hair loss treatment provides a solution for men suffering from general hair loss, various forms of alopecia or with scalp scars, including those as a result of hair transplant surgery. Of the solutions available, few are as immediate, permanent, realistic, hassle-free, non-invasive and cost-effective as the SMP® technique."

SMP® is a specialist application that is applied directly to the scalp to replicate the natural appearance of real hair follicles. Developed by HIS Hair Clinic, SMP® is widely regarded as the most advanced treatment of its kind available in the world today, specifically designed to create the most realistic illusion of hair possible.

How does SMP® work?

The SMP® technique process itself uses state of the art computerised equipment. It uses a range of specialist, single-use sterile micro needles to penetrate the dermal layer of the skin. A variety of different shades of specifically blended pigments is applied to guarantee consistent replication of the specific size, shape and density of hair replications and micro hairs.

This creates the simulation of real looking hair follicles and micro hairs that are replicated consistently and effectively. The replication of each hair follicle is a detailed process, each one being treated as an individual task. Only by applying this level of attention to detail can the most outstanding, consistent results be achieved.

As permanent as you want it to be

The quality of the ink used in the SMP process is crucial to the end result. HIS Hair takes great care in sourcing and managing the ink to

achieve optimum results every time. The ink used by HIS Hair provides a long lasting solution that, if clients follow their after-care instructions, retains its look for many years.

What can SMP® do?

The SMP® technique has helped thousands of men worldwide to achieve a youthful, modern appearance, whatever the pattern or extent of their hair loss. SMP® can:

Create the appearance of a fuller, thicker head of hair

Recreate a natural, more youthful frontal hairline and side profiles

Permanently camouflage the symptoms of alopecia, however severe or recurrent

Camouflage hair transplant scars from strip or FUE surgery

Hide birthmarks and accident-related scars or burns

Work as a combination solution with a hair transplant to provide additional density

Celebrities and their hair

Back in the '60s and '70s, the cropped look was the reserve of the Mod generation. Fast forward to 2010, and the shaven style is arguably the world's most popular haircut.

With countless celebrities sporting the style from David Beckham to Wentworth Miller, Jason Statham to Vin Diesel, the timeless cropped style is more desirable than ever. In fact, SMP® is fully endorsed by celebrity hairdresser and style icon Adele Phelan, who also wears his hair very short.

Furthermore the clean, sharp look is now more than welcome in the boardroom, adopted by key figures in some of the world's largest corporations. Whatever your career, from construction worker to chief executive, your new style and new-found confidence is very likely to benefit your career prospects.

Fast forward to 2010, and the shaven style is arguably the world's most popular haircut.

SMP® versus the alternatives

• Hair Transplant Surgery
Hair transplant surgery is an invasive, surgical procedure which usually results in permanent scarring. As the person ages and further hair loss is experienced, it would result in a need for temporary concealers or further surgery.

• Hair Systems (Wig)
Systems can be expensive to buy and usually involve significant ongoing costs. Many wearers also complain of poor hygiene and unpleasant smell. Hair systems also suffer from social stigma, resulting in secrecy and anxiety among many users.

• Drugs And Topical Treatments
While their effectiveness will always be a subject of much debate, drugs such as Finasteride (found in Propecia) and Minoxidil (found in Rogaine products) are known to produce side-effects. Treatment products can be expensive if used for extended periods of time, and benefits are usually quickly reversed.

Hong Kong SMP® specialist - Jonathan Tang

Jonathan Tang heads the HIS Hair Hong Kong clinic in Mong Kok. Conveniently located for both Hong Kong citizens and tourists alike, Jonathan and his team provide SMP® treatments specially devel-

oped for people suffering from hair loss.

Jonathan Tang, a former client of HIS, has spent an extensive period of time based at our Training Academy in Birmingham. Jonathan and his expert team have undergone extensive training in the highly specialised field of scalp pigmentation, completing the world's only accredited SMP® training program.

Jonathan's clients

"I'm super happy with my result; I can't thank Jonathan enough for what he's done for me. He was really understanding and patient with me, a true gent, and a true artist."

I do feel that I am now truly Free At Last, I'm only 26, but felt and looked 36. Maybe now, I'll feel confident enough to pursue my dreams, and feel attractive enough to date again.

I'm loving my new look. Confidence is flooding back in abundance. Yesterday, I even caught an attractive girl looking at me from the corner of my eye in Starbucks while I was queuing up to be served. It's been years since the opposite sex has taken notice of me. I hope this is the start of many more to come.

"I am 29 years old and did my third treatment almost 2 weeks ago with Jonathan in Hong Kong. I am very, very happy with my results, it looks completely natural and I've been getting nothing but compliments. I haven't really told anyone but a couple of friends who have hair problems as well. People tell me how I have great hair and should let it grow a little etc. Jonathan is a nice guy, he does his job properly, not once have I felt rushed or at risk of doing something I would regret. He's very easy to work with and makes you understand that this is a process and to take one step at the time."

SMP® Micro-pigmentation Hair loss Treatment will not only change clients' look, it will also change their outlook. Here are some of Jonathan's successful cases.

"VSF (another forum user) had 3 or 4 hair transplant strip scars, 2 scalp reduction scars, and it was also quite pitted on top, and his end result looked absolutely amazing. HIS before photos look like he was attacked by a guy with a samurai sword, and when his treatment was completed, his indoor and outdoor photos looked awesome. If VSF, with his seriously damaged scalp can look so amazing with SMP, I should be no trouble for the same practitioner to work the magic on me, because I only suffer from male pattern baldness with a healthy scalp."

I was so happy to learn that

it was Jonathan Tang who had treated VSF in Los Angeles last September. Because I live in Hong Kong, I know I can be treated by Jonathan too.

I had my treatment in Hong Kong in June with Jonathan, and I couldn't be any happier right now. My wife says it's taken 10 years off me.

It's really strange, these past 5 or 6 months, I see myself as having hair, not pigments. With all of the people I've told, they can't believe it's not real hair, and with all the people that I haven't told, they are trying to work out why I look younger and fitter recently.
